1. Understanding Restoril: What You Need to Know

Restoril belongs to a class of drugs known as benzodiazepines. It is primarily used for the short-term treatment of insomnia, helping patients fall asleep faster and stay asleep longer. Because it acts on the central nervous system, it is classified as a controlled substance in many jurisdictions.

Key Facts About Restoril

Feature	Information
Generic Name	Temazepam
Drug Class	Benzodiazepine
Primary Use	Short-term treatment of insomnia
Common Dosages	7.5mg, 15mg, 22.5mg, 30mg
Controlled Status	Schedule IV (US)

Because of its potential for dependency and misuse, getting Restoril requires a valid prescription from a licensed healthcare provider. Any website offering Restoril without a prescription is likely operating illegally and should be avoided.
