Adderall is one of the most widely prescribed medications for the treatment of Attention-Deficit/Hyperactivity Disorder (ADHD). It belongs to a class of drugs known as **central nervous system stimulants**, which work by affecting certain neurotransmitters in the brain that control attention, focus, and impulse regulation.

Despite its medical benefits, Adderall is also a **Schedule II controlled substance in the United States**, meaning it has a recognized medical use but also a high potential for misuse, dependence, and diversion if not properly regulated.

Because of this, Adderall is never legally available without a prescription, and its use is closely monitored by healthcare providers.
