## What Is Farmapram (Alprazolam)?

Farmapram is a **benzodiazepine-class medication** primarily prescribed to treat **anxiety disorders, panic attacks, and insomnia**. Its active ingredient, **Alprazolam**, helps calm the central nervous system by enhancing the effect of GABA—a neurotransmitter responsible for reducing nervous tension and overactivity.

Patients who suffer from chronic anxiety or panic symptoms often find relief with **Farmapram 1mg or 2mg**, as it provides rapid onset and effective symptom control when used as directed by a licensed provider.
