About Xanax (Alprazolam) and Its Medical Uses

Generic Name: *Alprazolam*

Category: Benzodiazepine (CNS depressant)

Xanax works by increasing the natural calming effects of GABA neurotransmitters in the brain. It is commonly prescribed for:

- Generalized Anxiety Disorder (GAD)
- Panic Disorder
- Social Anxiety Disorder (SAD)

- Short-term relief from stress-induced insomnia

When taken as directed, Xanax provides quick relief—often within 30 minutes—making it one of the most prescribed anxiety medications worldwide.
